Figure 8. Supporting reference and UHD flowgraphs

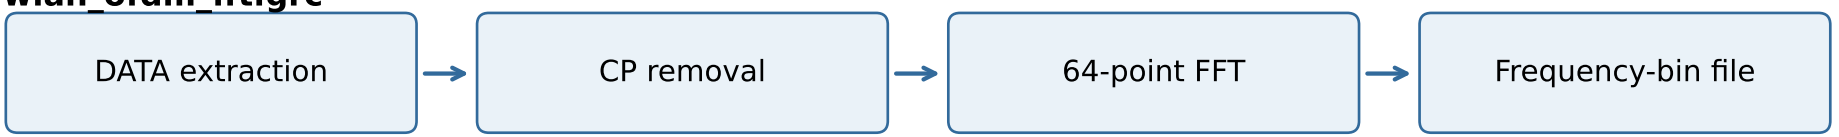
awgn_symbol_benchmark.grc

Executed: uncoded diagnostic. Python metrics + independent MATLAB score.

wlan_reference_channel.grc

Executed: all eight legacy rates. Offline Python EVM/pre-FEC BER; MATLAB post-FEC decode.

wlan_ofdm_fft.grc

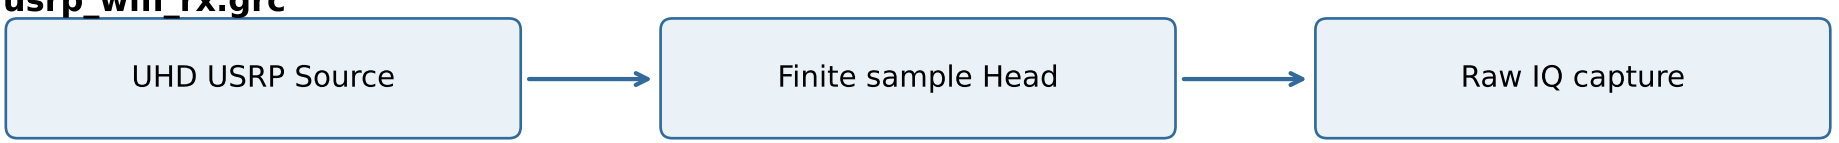


Executed: explicit native OFDM processing. Known schedule; output checked independently against NumPy.

usrp_wifi_tx.grc

Compiled only. Finite TX reference; configure actual RF hardware before use.

usrp_wifi_rx.grc



Compiled only. Steering readiness and full capture metadata belong in the measurement runner.

Native editable .grc files are in grc/; generated Python is in grc/generated/. RF graphs have not been run.
