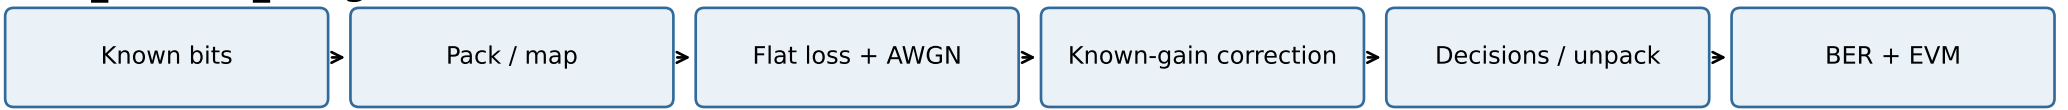
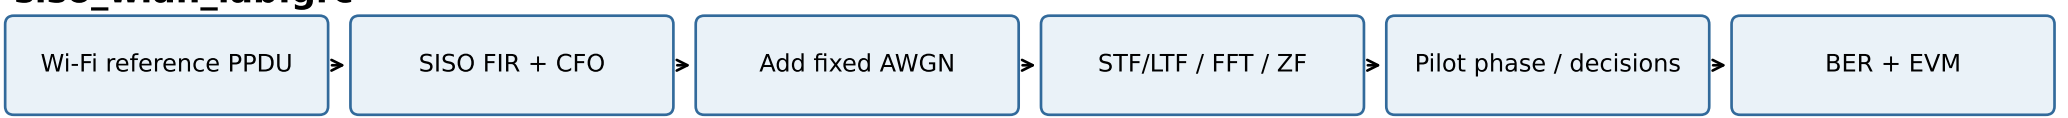
Figure S1. Complete SISO GNU Radio labs — one TX stream, one RX stream

siso_modem_lab.grc



Live plots: TX/RX spectrum + waterfall + I/Q time; equalized/reference constellation; numerical BER and EVM.

siso_wlan_lab.grc



Live plots: TX/RX spectrum + waterfall + I/Q time; equalized/reference constellation; numerical BER and EVM.

Wi-Fi receiver uses known burst timing/rate/length. No MAC, acknowledgements, retries or MIMO processing.

The TX reference branch supplies the exact aligned bits and symbols to the metrics. Both labs save integer counts on Stop.
